

## C3 Textile

Cleanliness Contamination  
Control Textile

ESA Spark Funding Germany

### Space Technology

#### Cleanroom for Space Applications.

Cleanroom fabrics are primarily used in the space industry for cleanroom garments or to protect objects from contamination.

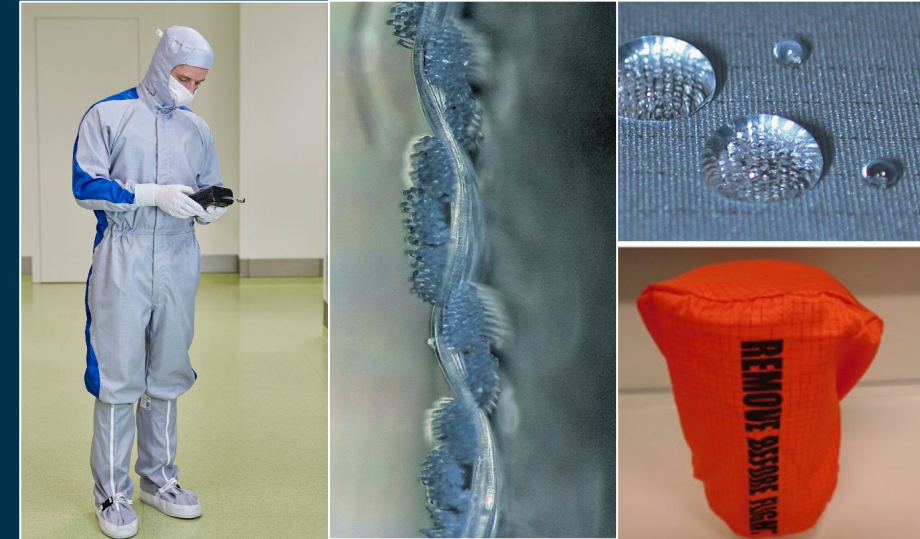

### Non-Space Application

#### Saving resources and the environment.

- In other areas, disposable solutions can be replaced by reusable products, thus saving resources and the environment.
- Especially in the area of infection control, new approaches are possible - such as simple separations between risky and less risky areas.

### Benefits

- Initial approaches to solutions can now be explored further.
- New markets - which have not been in the focus so far - can now be developed.
